MafDb.1Kgenomes.phase3.GRCh38-package

Annotation package for minor allele frequency data from the 1000 Genomes Project Phase 3

Description

This annotation package stores minor allele frequency (MAF) data from the Phase 3 of the 1000 Genomes Project. The data are exposed to the user in the form of a GScores object, named after the package and loaded into memory only as different chromosomes and populations are being queried. The class definition and methods to access GScores objects are found in the GenomicScores software package. To minimize disk space and memory requirements, MAF values larger or equal than 0.1 are stored using two significant digits, while MAF values smaller than 0.1 are stored using one significant digit.

Please consult the 1000 Genomes Project FAQ page at http://www.internationalgenome.org/faq before you use these data for your own research.

Format

MafDb.1Kgenomes.phase3.GRCh38   GScores object containing MAF values from the 1000 Genomes Project Phase 3 downl

Author(s)

R. Castelo
