---

oligoData-package

*Provides sample datasets to be used with the oligo package.*

---

## Description

This package provides sample datasets (Affymetrix: Expression, Gene, Exon and SNP; NimbleGen: Expression, Tiling) to be used with the oligo package. The datasets are provided as FeatureSet extensions and require the respective annotation packages to be available.

## Details

| Dataset            | Class                | Array Type |
|--------------------|----------------------|------------|
| affyExpressionFS   | ExpressionFeatureSet | Expression |
| affyExonFS         | ExonFeatureSet       | Exon       |
| affyGeneFS         | GeneFeatureSet       | Gene       |
| affySnpFS          | SnpFeatureSet        | SNP        |
| nimbleExpressionFS | ExpressionFeatureSet | Expression |
| nimbleTilingFS     | TilingFeatureSet     | Tiling     |

## Author(s)

Benilton Carvalho <Benilton.Carvalho@cancer.org.uk>

## Examples

```
objNames <- c("affyExpressionFS",
              "affyExonFS",
              "affyExpressionFS",
              "affyGeneFS",
              "nimbleExpressionFS",
              "nimbleTilingFS")
desc <- function(objName){
  data(list=objName)
  class(get(objName))
}
sapply(objNames, desc)
```
